Thank you for the opportunity to submit comments on the U.S. Army Corps of Engineers (the Corps’) New York New Jersey Harbor and Tributaries Feasibility Study (NYNJHATS) and Draft Tier 1 Environmental Impact Statement (EIS). I live, work, play in ____________________, New York/New Jersey, where there is currently __________________________ being proposed as a flood mitigation measure in the Corps’ NYNJHATS. I am __________________________ these project features because they will __________________________ in my neighborhood. I think the Corps’ should work more closely with __________________________ to consider new ideas for flood control, such as __________________________ because my community values __________________________.

(insert your ideas, reference other projects)  
(these assets, waterfront access, etc.)

More public meetings, information sessions and workshops are needed, before the agency reaches a decision milestone, to help the public better understand the proposal and provide constructive feedback that the Corps can use to refine the project. I recommend the Corps, State and City coordinate together to host information sessions on this project when most residents are available __________________________ at __________________________ in my neighborhood.

(during these times)  
(this location)

Overall, I __________________________ these features to come to my neighborhood because it will __________________________. The Corps should do more analysis on the impacts of __________________________ (describe how it will improve/alter/destroy what you care about) (name local project features) ________ will have on __________________________ before the agency makes a final recommendation to the City and non-federal sponsors for review an inclusion in the Final Tier 1 EIS and Chief’s Report.
